

REMARKS / ARGUMENTS

This divisional application is in response to the Examiner's Restriction Requirement dated August 12, 2003 in parent application 09/853,487 filed May 10, 2001. Applicant herein elects species II designated by the Examiner for electronic games classified in class 463, subclass 30. New claims 1 - 75 are all readable upon the elected species in which two communicating processors execute first and second game programs and generate data for player-controlled characters with plural body parts. One of the processors is in a video game system that has a disk reader. The other processor is in a separately housed portable game system (also called a "hand-held game machine" and a "stand-alone hand-held game system" in the specification) that has a discrete display device (e.g. an LCD).

The Specification and Drawings in this Divisional application are the same as in the original parent application with paragraph numbers added and formal drawings to correct informal margins. There is no new subject matter in the Specification and Drawings.

Respectfully submitted,

GRAYBEAL JACKSON HALEY LLP
